

How to install MOVERIO ADB USB Driver

< In case of Windows >

1 Obtain Android SDK

1-1 Download Android Studio from the following site:

<http://developer.android.com/sdk/index.html>

2 Install Android Studio

2-1 Install Android Studio by the following instruction:

Directory(default) : C:\Users\<username>\AppData\Local\Android\sdk

※Following section is described assuming Android Studio is installed in the above directory.

2-2 Download JDK(7 or more) from the following site.

<http://www.oracle.com/technetwork/java/javase/downloads/jdk8-downloads-2133151.html>

3 Download and install Platform-tools and Driver

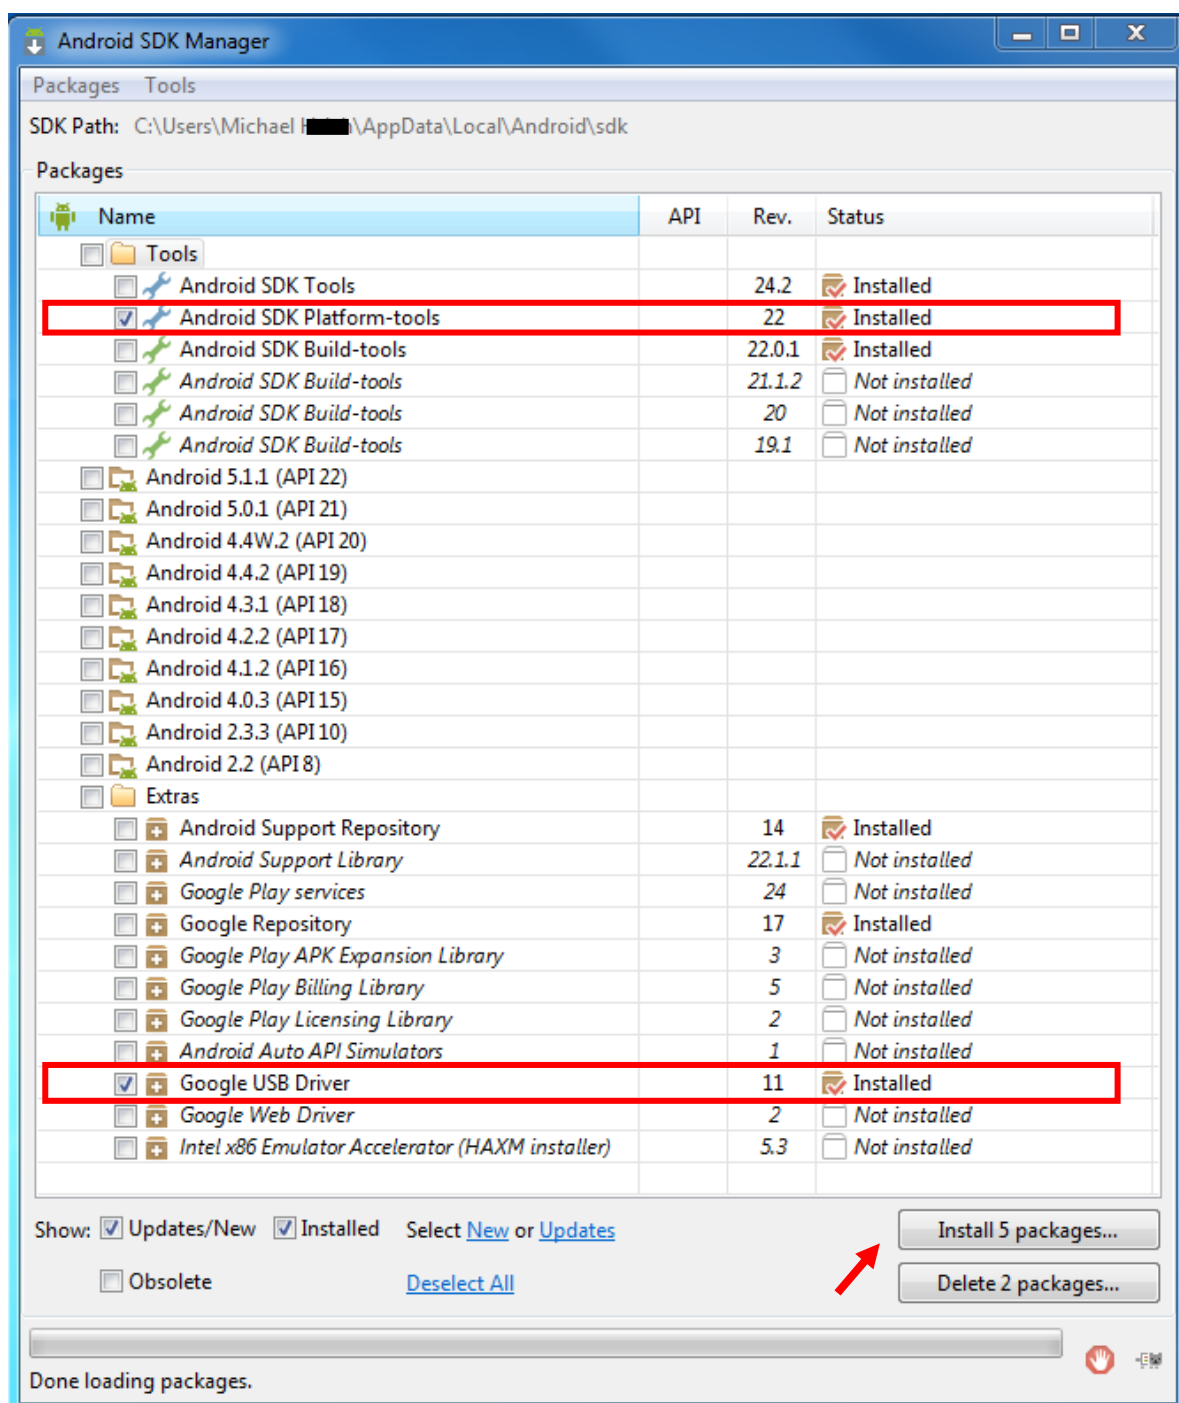

3-1 Execute "C:\Users\<username>\AppData\Local\Android\sdk\ SDK Manager.exe"

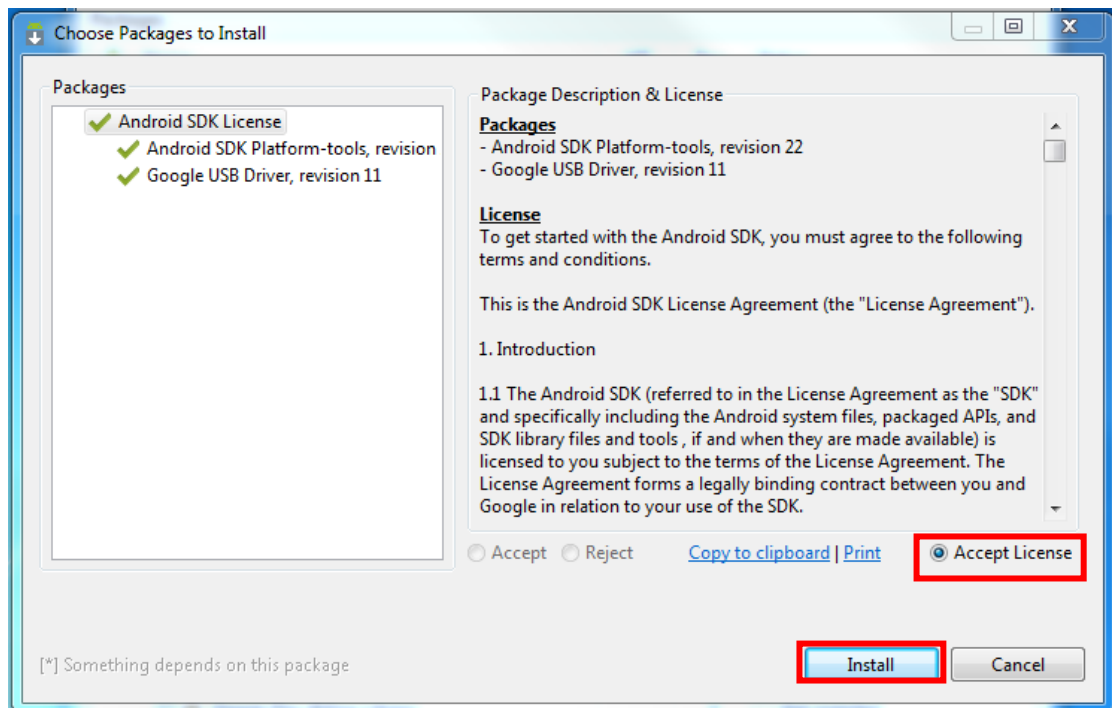

- ※ It may fail to launch SDK Manager with a message "No Packages found". This is because the proxy setting is not properly set. In this case, you need to close all dialogs other than "Android SDK", then select setup proxy at Tools – Options menu.

3-2 Select files and download

Check [Extras]/[Google USB Driver].
Click Accept License, then [Install] button.

When installation is finished, the following folder is created:

C:\Users\<username>\AppData\Local\Android\sdk\extras\google\usb_driver

Close **Android SDK Manager**.

4 Setup MOVERIO to USB Driver

4-1 Add the following 4 lines at [Google.NTx86] and [Google.NTamd64] in

C:\Users\<username>\AppData\Local\Android\sdk\extras\google\usb_driver\android_winusb.inf file.

4-2 Setup Vender ID to ADB

Start command prompt

C:\>**cd AppData\Local\Android\sdk\tools**

C:\Users\<username>\AppData\Local\Android\sdk\tools>**android.bat update adb**

```

C:\Users\Michael <redacted>>cd AppData/Local/Android/sdk/tools
C:\Users\Michael <redacted>\AppData\Local\Android\sdk\tools>android.bat update adb

```

As a result, [C:\Users\<username>\.android\adb_usb.ini] file will be created

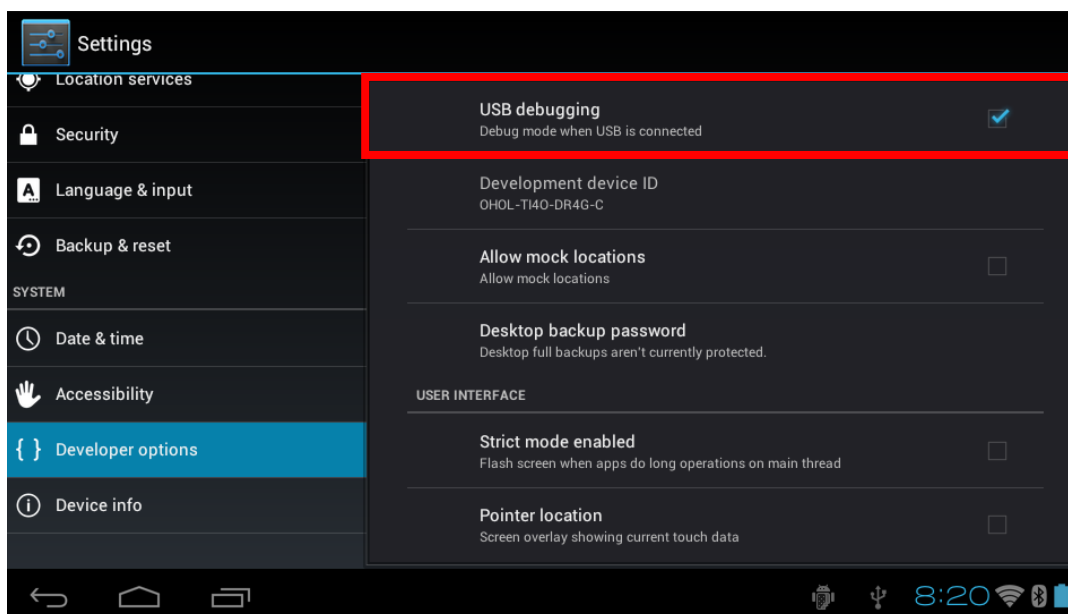

Open this ini file with a Text Editor, and add the vender ID (0x04B8) as below:

```
# ANDROID 3RD PARTY USB VENDOR ID LIST -- DO NOT EDIT.  
# USE 'android update adb' TO GENERATE.  
# 1 USB VENDOR ID PER LINE.  
0x04B8
```

Save the change and close the Editor.

5 Set MOVERIO USB Debug mode. (Requires a developer firmware version. Refer to document titled, “How to Modify the System Software for Developer”).

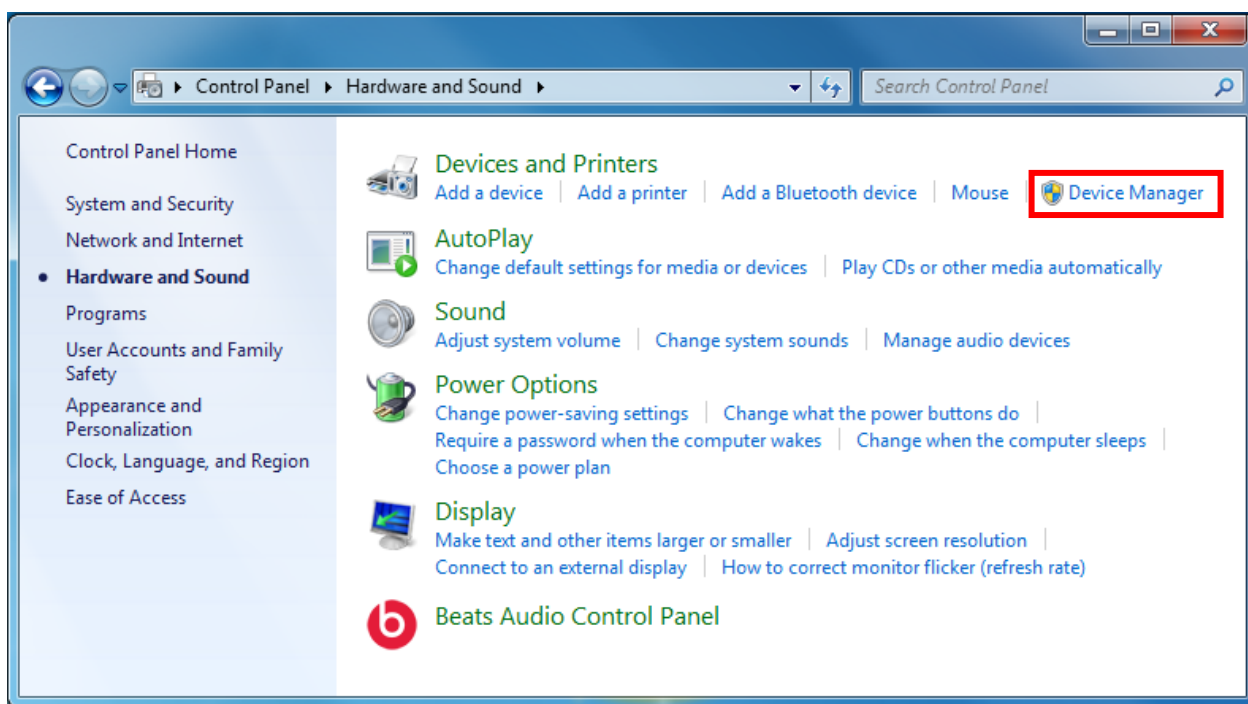

Settings -> System -> Developer options -> Check “USB Debugging”

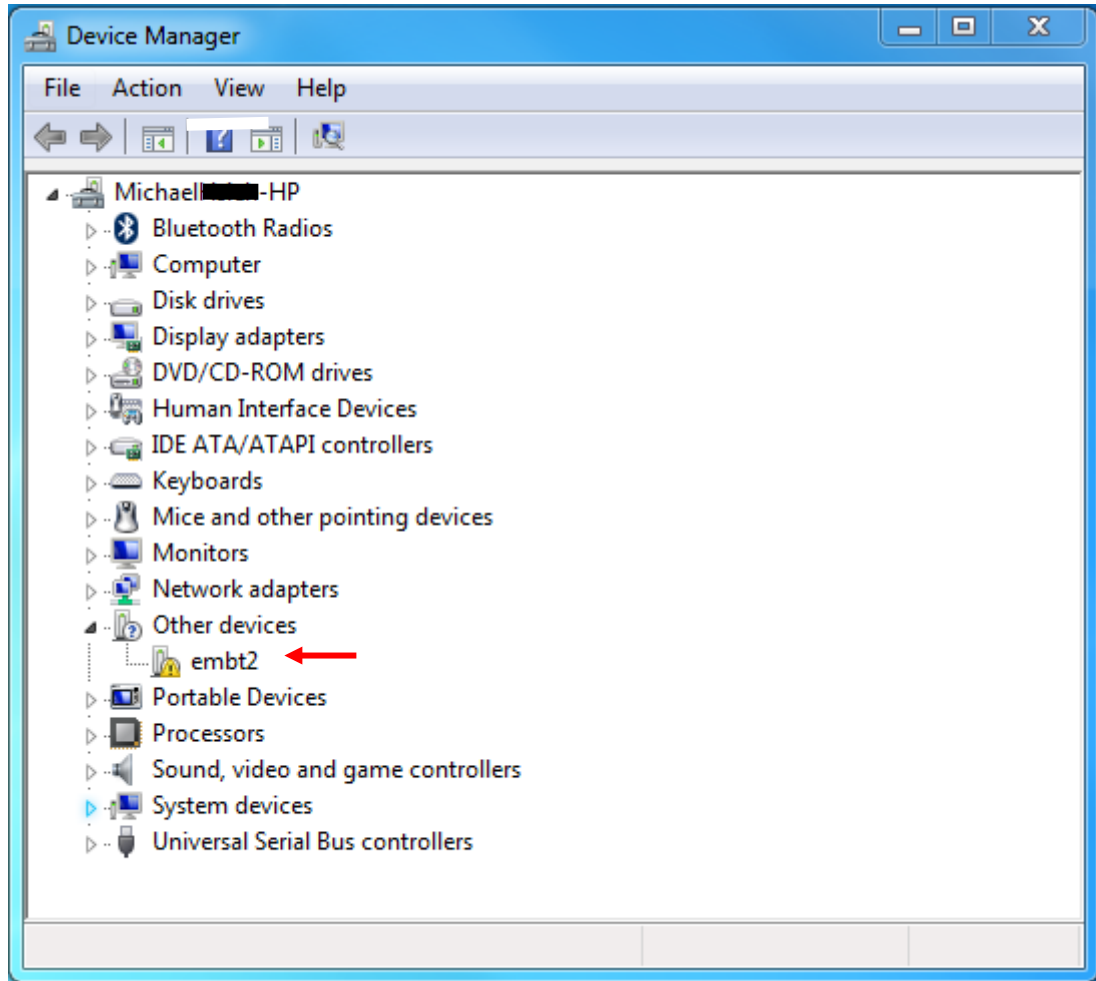

6 While MOVERIO is powered ON, connect MOVERIO to PC

6-1 Install driver for USB connection to PC

- Connect MOVERIO to PC. If no message appears, restart MOVERIO and connect PC again.
- If “Found new Hardware Wizard” window pops up on PC, start Control Panel, select Hardware and Sound and look for Device Manager.

- Right click embt2 under Other Device, select “Update Driver Software...”.

- Select “Browse my computer for driver software”.
- Enter your specific Android SDK location to look for the USB driver -- using the following example “C:\Users\<username>\AppData\Local\Android\sdk\extras\google\usb_driver”
- Once the device is registered under an “Android Device” and shows Android Composite ADB Interface; then ADB connection can be used.

You can start using ADB for debugging..

Confirm the connection

- 1 Connect MOVERIO to PC through USB cable.
- 2 Confirm MOVERIO to PC connection
 - 2-1 With command prompt, change to the following directory
"C:\Users\<username>\AppData\Local\Android\sdk\platform-tools"

cd AppData\Local\Android\sdk\platform-tools

- 2-2 Execute "adb devices" to confirm name of device (0123456789ABCDEF) which is displayed.
adb devices

```
C:\Users\Michael [REDACTED]>cd AppData\Local\Android\sdk\platform-tools
C:\Users\Michael [REDACTED]\AppData\Local\Android\sdk\platform-tools>adb devices
List of devices attached
0123456789ABCDEF      device

C:\Users\Michael [REDACTED]\AppData\Local\Android\sdk\platform-tools>
```

If name of device (0123456789ABCDEF) is not displayed, repeat set 1 and 2 by re-connecting MOVERIO.
